

RBAC Positions and Table Access

Position: board_chair

Description: Presides over Board of Education; sets agendas and ensures effective governance and policy oversight.

Responsibilities:

- Lead meetings of the Board of Education
- Set board agendas and priorities
- Represent the board at district and community functions
- Ensure governance policies are followed

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bodies:
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- committees: Stores committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_documents: Stores meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- memberships: Stores memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- proposal_documents: Stores proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposal_reviews: Stores proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- publications: Stores publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- resolutions: Stores resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- votes: Stores votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: board_vice_chair

Description: Supports the board chair and presides when necessary; assists with board priorities and committee work.

Responsibilities:

- Support the board chair
- Preside over meetings when chair is absent
- Assist in setting agendas and board priorities

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- **section_meetings:** Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- **sis_import_jobs:** Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- **user_accounts:** Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- **users:** Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- **votes:** Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- **webhooks:** Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: board_clerk

Description: Maintains official records, minutes, and notices; certifies board actions and manages governance documentation.

Responsibilities:

- Maintain official board records and minutes
- Certify board decisions and resolutions
- Handle official correspondence for the board

Tables:

- **agenda_item_approvals:** Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- **agenda_item_files:** Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- **agenda_items:** Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- **agenda_workflow_steps:** Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- **agenda_workflows:** Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- **audit_logs:** Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- **bodies:**

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: school_board_member_trustee

Description: Elected/appointed official who sets policy, adopts budgets, and represents community interests at the district level.

Responsibilities:

- Vote on district policies and budgets
- Represent community interests on the board
- Serve on committees as assigned

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bodies:
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps

(created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: superintendent

Description: Chief executive of the school district; accountable for academic results, operations, finance, and policy implementation across all schools.

Responsibilities:

- Serve as chief executive officer of the school district
- Implement board policies across the district
- Oversee district operations, academics, and staff
- Report regularly to the Board of Education

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- ap_vendors: Stores ap vendors records for the application. Key attributes include name. References related entities via: tax. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bodies:
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

2 foreign key field(s) detected.

- deduction_codes: Stores deduction codes records for the application. Key attributes include code, name. References related entities via: vendor. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- earning_codes: Stores earning codes records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`.

- employee_deductions: Stores employee deductions records for the application. References related entities via: deduction code, employee, run. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- employee_earnings: Stores employee earnings records for the application. References related entities via: earning code, employee, run. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- entity_tags: Stores entity tags records for the application. References related entities via: entity, tag. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- fees: Stores fees records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- fiscal_years: Stores fiscal years records for the application. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`.

- gl_account_balances: Stores gl account balances records for the application. References related entities via: account, fiscal period. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- gl_account_segments: Stores gl account segments records for the application. References related entities via: account, segment, value. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- gl_accounts: Stores gl accounts records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- gl_segment_values: Stores gl segment values records for the application. Key attributes include code, name. References related entities via: segment. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- gl_segments: Stores gl segments records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- google_accounts: Stores google accounts records for the application. References related entities via: client, user. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- invoices: Stores invoices records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- journal_batches: Stores journal batches records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- journal_entries: Stores journal entries records for the application. References related entities via: batch, fiscal period. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- journal_entry_lines: Stores journal entry lines records for the application. References related entities via: account, entry. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meal_accounts: Stores meal accounts records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- organizations: Stores organizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- payments: Stores payments records for the application. References related entities via: invoice. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- payroll_runs: Stores payroll runs records for the application. References related entities via: created by user, pay period, posted entry. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2

foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- state_reporting_snapshots: Stores state reporting snapshots records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- states: Stores states records for the application. Key attributes include code, name. 2 column(s) defined.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- vendors: Stores vendors records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: head_of_school

Description: Overall leader of a single school campus with accountability for instruction, culture, staffing, and community engagement.

Responsibilities:

- Provide overall leadership for a school
- Ensure academic quality and student support
- Manage faculty, staff, and resources
- Engage with families and the community

Tables:

- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- ap_vendors: Stores ap vendors records for the application. Key attributes include name. References related entities via: tax. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- deduction_codes: Stores deduction codes records for the application. Key attributes include code, name. References related entities via: vendor. Includes standard audit timestamps (created_at,

updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- earning_codes: Stores earning codes records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`.

- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- employee_deductions: Stores employee deductions records for the application. References related entities via: deduction code, employee, run. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- employee_earnings: Stores employee earnings records for the application. References related entities via: earning code, employee, run. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- fees: Stores fees records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- fiscal_years: Stores fiscal years records for the application. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`.

- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- gl_account_balances: Stores gl account balances records for the application. References related entities via: account, fiscal period. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- gl_account_segments: Stores gl account segments records for the application. References related entities via: account, segment, value. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- gl_accounts: Stores gl accounts records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- gl_segment_values: Stores gl segment values records for the application. Key attributes include code, name. References related entities via: segment. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- gl_segments: Stores gl segments records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- google_accounts: Stores google accounts records for the application. References related entities via: client, user. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- invoices: Stores invoices records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- journal_batches: Stores journal batches records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- journal_entries: Stores journal entries records for the application. References related entities via: batch, fiscal period. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- journal_entry_lines: Stores journal entry lines records for the application. References related entities via: account, entry. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meal_accounts: Stores meal accounts records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- payments: Stores payments records for the application. References related entities via: invoice. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- payroll_runs: Stores payroll runs records for the application. References related entities via: created by user, pay period, posted entry. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- vendors: Stores vendors records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`.

Position: deputy_superintendent

Description: Senior district leader who oversees major divisions (e.g., academics, operations) and acts on behalf of the superintendent as needed.

Responsibilities:

- Support the superintendent in district leadership
- Oversee specific divisions such as academics or operations
- Act as superintendent during absences

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8

column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- organizations: Stores organizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- state_reporting_snapshots: Stores state reporting snapshots records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.
- states: Stores states records for the application. Key attributes include code, name. 2 column(s) defined.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

Position: associate_superintendent

Description: District executive responsible for a portfolio such as curriculum, HR, finance, or student services; manages directors and principals as assigned.

Responsibilities:

- Oversee major district functions (curriculum, HR, finance, etc.)
- Supervise directors or department heads
- Advise superintendent on policy and operations

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- assignment_categories: Stores assignment categories records for the application. Key attributes include name. References related entities via: section. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- assignments: Stores assignments records for the application. Key attributes include name. References related entities via: category, section. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance: Stores attendance records for the application. References related entities via: meeting, user. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance_codes: Stores attendance codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.
- attendance_daily_summary: Stores attendance daily summary records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- behavior_codes: Stores behavior codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- behavior_interventions: Stores behavior interventions records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_routes: Stores bus routes records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_stop_times: Stores bus stop times records for the application. References related entities via: route, stop. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bus_stops: Stores bus stops records for the application. Key attributes include name. References related entities via: route. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendar_days: Stores calendar days records for the application. References related entities via: calendar. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendars: Stores calendars records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- consequence_types: Stores consequence types records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- consequences: Stores consequences records for the application. References related entities via: incident, participant. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- evaluation_assignments: Stores evaluation assignments records for the application. References related entities via: cycle, evaluator user, subject user, template. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- final_grades: Stores final grades records for the application. References related entities via: grading period, section, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- fiscal_periods: Stores fiscal periods records for the application. References related entities via: fiscal year. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- gradebook_entries: Stores gradebook entries records for the application. References related entities via: assignment, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- health_profiles: Stores health profiles records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- hr_position_assignments: Stores hr position assignments records for the application. References related entities via: employee, position. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- immunization_records: Stores immunization records records for the application. References related entities via: immunization, student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- immunizations: Stores immunizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- medication_administrations: Stores medication administrations records for the application. References related entities via: medication, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- medications: Stores medications records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- nurse_visits: Stores nurse visits records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- organizations: Stores organizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- pay_periods: Stores pay periods records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- periods: Stores periods records for the application. Key attributes include name. References related entities via: bell schedule. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.

- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.

- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- state_reporting_snapshots: Stores state reporting snapshots records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.
- states: Stores states records for the application. Key attributes include code, name. 2 column(s) defined.
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- teacher_section_assignments: Stores teacher section assignments records for the application. References related entities via: section, staff. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: assistant_superintendent

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- organizations: Stores organizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- state_reporting_snapshots: Stores state reporting snapshots records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.
- states: Stores states records for the application. Key attributes include code, name. 2 column(s) defined.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: chief_of_staff

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: general_counsel

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: chief_schools_officer

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: principal

Description: Instructional and operational leader of a school; manages staff, implements curriculum, ensures safety, and partners with families.

Responsibilities:

- Lead daily operations of a school
- Oversee curriculum implementation and instruction
- Supervise teachers and staff
- Manage student discipline and parent communication

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- assignment_categories: Stores assignment categories records for the application. Key attributes include name. References related entities via: section. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- assignments: Stores assignments records for the application. Key attributes include name. References related entities via: category, section. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance: Stores attendance records for the application. References related entities via: meeting, user. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- attendance_codes: Stores attendance codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.
- attendance_daily_summary: Stores attendance daily summary records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- behavior_codes: Stores behavior codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- behavior_interventions: Stores behavior interventions records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_routes: Stores bus routes records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_stop_times: Stores bus stop times records for the application. References related entities via: route, stop. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bus_stops: Stores bus stops records for the application. Key attributes include name. References related entities via: route. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendar_days: Stores calendar days records for the application. References related entities via: calendar. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendars: Stores calendars records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- consequence_types: Stores consequence types records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- consequences: Stores consequences records for the application. References related entities via: incident, participant. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- entity_tags: Stores entity tags records for the application. References related entities via: entity, tag. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- evaluation_assignments: Stores evaluation assignments records for the application. References related entities via: cycle, evaluator user, subject user, template. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- final_grades: Stores final grades records for the application. References related entities via: grading period, section, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- fiscal_periods: Stores fiscal periods records for the application. References related entities via: fiscal year. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- goals: Stores goals records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- gradebook_entries: Stores gradebook entries records for the application. References related entities via: assignment, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- health_profiles: Stores health profiles records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- hr_employees: Stores hr employees records for the application. References related entities via: department segment, person, primary school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- hr_position_assignments: Stores hr position assignments records for the application. References related entities via: employee, position. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- hr_positions: Stores hr positions records for the application. Key attributes include title. References related entities via: department segment. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- immunization_records: Stores immunization records records for the application. References related entities via: immunization, student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- immunizations: Stores immunizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- meal_eligibility_statuses: Stores meal eligibility statuses records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- meal_transactions: Stores meal transactions records for the application. References related entities via: account. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- medication_administrations: Stores medication administrations records for the application. References related entities via: medication, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- medications: Stores medications records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- nurse_visits: Stores nurse visits records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- organizations: Stores organizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- pay_periods: Stores pay periods records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- periods: Stores periods records for the application. Key attributes include name. References related entities via: bell schedule. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- person:
- person_address:
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contact:
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- sis_behavior_codes:
- special_education_cases: Stores special education cases records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- staff: Stores staff records for the application. Key attributes include title. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- standardized_tests: Stores standardized tests records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- tags: Stores tags records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- teacher_section_assignments: Stores teacher section assignments records for the application. References related entities via: section, staff. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- test_administrations: Stores test administrations records for the application. References related entities via: school, test. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: assistant_principal

Description: Supports the principal in daily operations, student discipline, attendance, testing, and supervision of programs and staff.

Responsibilities:

- Support the principal in school management
- Handle student discipline and attendance issues
- Coordinate testing and academic programs
- Supervise extracurricular activities

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- assignment_categories: Stores assignment categories records for the application. Key attributes include name. References related entities via: section. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- assignments: Stores assignments records for the application. Key attributes include name. References related entities via: category, section. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- attendance: Stores attendance records for the application. References related entities via: meeting, user. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance_codes: Stores attendance codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.
- attendance_daily_summary: Stores attendance daily summary records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- behavior_codes: Stores behavior codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- behavior_interventions: Stores behavior interventions records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_routes: Stores bus routes records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_stop_times: Stores bus stop times records for the application. References related entities via: route, stop. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bus_stops: Stores bus stops records for the application. Key attributes include name. References related entities via: route. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendar_days: Stores calendar days records for the application. References related entities via: calendar. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendars: Stores calendars records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- consequence_types: Stores consequence types records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- consequences: Stores consequences records for the application. References related entities via: incident, participant. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s)

defined. Primary key is `id`. 3 foreign key field(s) detected.

- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- evaluation_assignments: Stores evaluation assignments records for the application. References related entities via: cycle, evaluator user, subject user, template. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- final_grades: Stores final grades records for the application. References related entities via: grading period, section, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- fiscal_periods: Stores fiscal periods records for the application. References related entities via: fiscal year. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- goals: Stores goals records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- gradebook_entries: Stores gradebook entries records for the application. References related entities via: assignment, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- health_profiles: Stores health profiles records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- hr_position_assignments: Stores hr position assignments records for the application. References related entities via: employee, position. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- immunization_records: Stores immunization records records for the application. References related entities via: immunization, student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- immunizations: Stores immunizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- meal_eligibility_statuses: Stores meal eligibility statuses records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- meal_transactions: Stores meal transactions records for the application. References related entities via: account. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- medication_administrations: Stores medication administrations records for the application. References related entities via: medication, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- medications: Stores medications records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- nurse_visits: Stores nurse visits records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- pay_periods: Stores pay periods records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- periods: Stores periods records for the application. Key attributes include name. References related entities via: bell schedule. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- person:
- person_address:
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contact:
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- sis_behavior_codes:
- special_education_cases: Stores special education cases records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- tags: Stores tags records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- teacher_section_assignments: Stores teacher section assignments records for the application. References related entities via: section, staff. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: associate_principal

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- assignment_categories: Stores assignment categories records for the application. Key attributes include name. References related entities via: section. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- assignments: Stores assignments records for the application. Key attributes include name. References related entities via: category, section. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance: Stores attendance records for the application. References related entities via: meeting, user. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance_codes: Stores attendance codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.
- attendance_daily_summary: Stores attendance daily summary records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- behavior_codes: Stores behavior codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- behavior_interventions: Stores behavior interventions records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_routes: Stores bus routes records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_stop_times: Stores bus stop times records for the application. References related entities via: route, stop. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bus_stops: Stores bus stops records for the application. Key attributes include name. References related entities via: route. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendar_days: Stores calendar days records for the application. References related entities via: calendar. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendars: Stores calendars records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- consequence_types: Stores consequence types records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- consequences: Stores consequences records for the application. References related entities via: incident, participant. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- evaluation_assignments: Stores evaluation assignments records for the application. References related entities via: cycle, evaluator user, subject user, template. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- final_grades: Stores final grades records for the application. References related entities via: grading period, section, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- fiscal_periods: Stores fiscal periods records for the application. References related entities via: fiscal year. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- gradebook_entries: Stores gradebook entries records for the application. References related entities via: assignment, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- health_profiles: Stores health profiles records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- hr_position_assignments: Stores hr position assignments records for the application. References related entities via: employee, position. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- immunization_records: Stores immunization records records for the application. References related entities via: immunization, student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- immunizations: Stores immunizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- medication_administrations: Stores medication administrations records for the application. References related entities via: medication, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- medications: Stores medications records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- nurse_visits: Stores nurse visits records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- pay_periods: Stores pay periods records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- periods: Stores periods records for the application. Key attributes include name. References related entities via: bell schedule. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.

Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at,

updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- teacher_section_assignments: Stores teacher section assignments records for the application. References related entities via: section, staff. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: vice_principal

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- assignment_categories: Stores assignment categories records for the application. Key attributes include name. References related entities via: section. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- assignments: Stores assignments records for the application. Key attributes include name. References related entities via: category, section. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance: Stores attendance records for the application. References related entities via: meeting, user. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance_codes: Stores attendance codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.
- attendance_daily_summary: Stores attendance daily summary records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- behavior_codes: Stores behavior codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- behavior_interventions: Stores behavior interventions records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_routes: Stores bus routes records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_stop_times: Stores bus stop times records for the application. References related entities via: route, stop. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bus_stops: Stores bus stops records for the application. Key attributes include name. References related entities via: route. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendar_days: Stores calendar days records for the application. References related entities via: calendar. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendars: Stores calendars records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- consequence_types: Stores consequence types records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- consequences: Stores consequences records for the application. References related entities via: incident, participant. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- evaluation_assignments: Stores evaluation assignments records for the application. References related entities via: cycle, evaluator user, subject user, template. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- final_grades: Stores final grades records for the application. References related entities via: grading period, section, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- fiscal_periods: Stores fiscal periods records for the application. References related entities via: fiscal year. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- gradebook_entries: Stores gradebook entries records for the application. References related entities via: assignment, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- health_profiles: Stores health profiles records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- hr_position_assignments: Stores hr position assignments records for the application. References related entities via: employee, position. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- immunization_records: Stores immunization records records for the application. References related entities via: immunization, student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- immunizations: Stores immunizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- medication_administrations: Stores medication administrations records for the application. References related entities via: medication, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- medications: Stores medications records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- nurse_visits: Stores nurse visits records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- pay_periods: Stores pay periods records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- periods: Stores periods records for the application. Key attributes include name. References related entities via: bell schedule. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.

Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at,

updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- teacher_section_assignments: Stores teacher section assignments records for the application. References related entities via: section, staff. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: dean_of_students

Description: Leads student culture, behavior systems, and attendance interventions; collaborates with counselors and teachers to support students.

Responsibilities:

- Manage student discipline and behavior programs
- Promote positive school culture and climate
- Oversee attendance and truancy interventions

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- attendance: Stores attendance records for the application. References related entities via: meeting, user. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- attendance_codes: Stores attendance codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.
- attendance_daily_summary: Stores attendance daily summary records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- behavior_codes: Stores behavior codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- behavior_interventions: Stores behavior interventions records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendar_days: Stores calendar days records for the application. References related entities via: calendar. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendars: Stores calendars records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- consequence_types: Stores consequence types records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- consequences: Stores consequences records for the application. References related entities via: incident, participant. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- fiscal_periods: Stores fiscal periods records for the application. References related entities via: fiscal year. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.

- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- pay_periods: Stores pay periods records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- periods: Stores periods records for the application. Key attributes include name. References related entities via: bell schedule. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- sis_behavior_codes:
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: dean_of_academics

Description: Leads academic programming, schedules, grading policies, and instructional quality; supports teachers with curriculum and assessments.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- assignment_categories: Stores assignment categories records for the application. Key attributes include name. References related entities via: section. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- assignments: Stores assignments records for the application. Key attributes include name. References related entities via: category, section. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bus_routes: Stores bus routes records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_stops: Stores bus stops records for the application. Key attributes include name. References related entities via: route. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- evaluation_assignments: Stores evaluation assignments records for the application. References related entities via: cycle, evaluator user, subject user, template. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- final_grades: Stores final grades records for the application. References related entities via: grading period, section, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- gradebook_entries: Stores gradebook entries records for the application. References related entities via: assignment, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- hr_employees: Stores hr employees records for the application. References related entities via: department segment, person, primary school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- hr_position_assignments: Stores hr position assignments records for the application. References related entities via: employee, position. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- hr_positions: Stores hr positions records for the application. Key attributes include title. References related entities via: department segment. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- staff: Stores staff records for the application. Key attributes include title. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- standardized_tests: Stores standardized tests records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- tags: Stores tags records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- teacher_section_assignments: Stores teacher section assignments records for the application. References related entities via: section, staff. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- test_administrations: Stores test administrations records for the application. References related entities via: school, test. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: grade_level_dean

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_residential_life

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: activities_director

Description: Plans and supervises extracurricular programs, clubs, and events; coordinates logistics, eligibility, and student engagement.

Responsibilities:

- Organize and supervise extracurricular programs
- Coordinate school events, clubs, and activities
- Support student engagement beyond the classroom

Tables:

- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: athletics_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: assistant_athletics_director

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: head_of_upper_school

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: head_of_middle_school

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: head_of_lower_school

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s)

defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: middle_school_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: high_school_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: music_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: band_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: theater_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: physical_education_teacher

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: world_languages_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: early_childhood_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: instructional_coach

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: mentor_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: media_specialist

Description: Supports instructional technology and media resources; coaches staff on integrating digital tools into instruction.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- activities: Stores activities records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- library_checkouts: Stores library checkouts records for the application. References related entities via: item, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- library_fines: Stores library fines records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- library_holds: Stores library holds records for the application. References related entities via: item, person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- library_items: Stores library items records for the application. Key attributes include title. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- move_orders: Stores move orders records for the application. References related entities via: from space, person, project, to space. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- orders: Stores orders records for the application. References related entities via: event, purchaser user. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- ticket_scans: Stores ticket scans records for the application. References related entities via: scanned by user, ticket. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.
- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: teacher_librarian

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- library_checkouts: Stores library checkouts records for the application. References related entities via: item, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- library_fines: Stores library fines records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- library_holds: Stores library holds records for the application. References related entities via: item, person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- library_items: Stores library items records for the application. Key attributes include title. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: substitute_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: teacher_resident

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: school_counselor

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit

timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores `cic` resolutions records for the application. Key attributes include `title`. References related entities via: `meeting`. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores `cic` votes records for the application. References related entities via: `motion`, `person`. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `contacts`: Stores contacts records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `document_permissions`: Stores document permissions records for the application. References related entities via: `principal`, `resource`. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `ell_plans`: Stores `ell` plans records for the application. References related entities via: `student`. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `emergency_contacts`: Stores emergency contacts records for the application. References related entities via: `person`. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `guardians`: Stores guardians records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 4 column(s) defined. Primary key is ``id``.
- `iep_plans`: Stores `iep` plans records for the application. References related entities via: `special ed case`. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `meeting_files`: Stores meeting files records for the application. References related entities via: `file`, `meeting`. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: `meeting`, `user`. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: `meeting`. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: `meeting`. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include `title`. References related entities via: `governing body`, `org`. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: `agenda item`, `moved by`, `seconded by`. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include `code`. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `person_addresses`: Stores person addresses records for the application. References related entities via: `address`, `person`. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key

is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: guidance_counselor

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at,

updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.

- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary

key is `id`. 1 foreign key field(s) detected.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: school_social_worker

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at).

9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s)

defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: family_liaison

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: school_nurse

Description: Delivers school health services; maintains immunization and health records; responds to medical needs and emergencies.

Responsibilities:

- Provide health services to students
- Manage immunization and health records
- Administer medications and respond to emergencies
- Promote health education in the school community

Tables:

- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.

- health_profiles: Stores health profiles records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- immunization_records: Stores immunization records records for the application. References related entities via: immunization, student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- immunizations: Stores immunizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- medication_administrations: Stores medication administrations records for the application. References related entities via: medication, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- medications: Stores medications records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- nurse_visits: Stores nurse visits records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.

- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

Position: health_aide

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: homeless_liaison

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: restorative_practices_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: registrar

Description: Owns student records and transcripts; manages enrollments, scheduling, grading windows, and state reporting submissions.

Responsibilities:

- Maintain student academic records and transcripts
- Oversee course scheduling and enrollment
- Manage student data for state reporting
- Support registration and transfer processes

Tables:

- academic_terms: Stores academic terms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- assignment_categories: Stores assignment categories records for the application. Key attributes include name. References related entities via: section. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- assignments: Stores assignments records for the application. Key attributes include name. References related entities via: category, section. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- attendance: Stores attendance records for the application. References related entities via: meeting, user. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- attendance_codes: Stores attendance codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined.

- attendance_daily_summary: Stores attendance daily summary records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- attendance_events: Stores attendance events records for the application. Key attributes include code. References related entities via: section meeting, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- behavior_codes: Stores behavior codes records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.

- behavior_interventions: Stores behavior interventions records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- bus_routes: Stores bus routes records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- bus_stops: Stores bus stops records for the application. Key attributes include name. References related entities via: route. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendar_days: Stores calendar days records for the application. References related entities via: calendar. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- calendars: Stores calendars records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- consequence_types: Stores consequence types records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined.
- consequences: Stores consequences records for the application. References related entities via: incident, participant. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- evaluation_assignments: Stores evaluation assignments records for the application. References related entities via: cycle, evaluator user, subject user, template. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- events: Stores events records for the application. Key attributes include title. References related entities via: activity, school. Includes standard audit timestamps (created_at, updated_at). 12 column(s)

defined. Primary key is `id`. 2 foreign key field(s) detected.

- final_grades: Stores final grades records for the application. References related entities via: grading period, section, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- fiscal_periods: Stores fiscal periods records for the application. References related entities via: fiscal year. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- goals: Stores goals records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- gradebook_entries: Stores gradebook entries records for the application. References related entities via: assignment, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.

- hr_employees: Stores hr employees records for the application. References related entities via: department segment, person, primary school. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- hr_position_assignments: Stores hr position assignments records for the application. References related entities via: employee, position. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- hr_positions: Stores hr positions records for the application. Key attributes include title. References related entities via: department segment. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- immunizations: Stores immunizations records for the application. Key attributes include name, code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- meal_eligibility_statuses: Stores meal eligibility statuses records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s)

defined. Primary key is `id`. 1 foreign key field(s) detected.

- meal_transactions: Stores meal transactions records for the application. References related entities via: account. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- medication_administrations: Stores medication administrations records for the application. References related entities via: medication, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- medications: Stores medications records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- nurse_visits: Stores nurse visits records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- pay_periods: Stores pay periods records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- periods: Stores periods records for the application. Key attributes include name. References related entities via: bell schedule. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- person:

- person_address:

- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- person_contact:

- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.

- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7

column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- special_education_cases: Stores special education cases records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- staff: Stores staff records for the application. Key attributes include title. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- standardized_tests: Stores standardized tests records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- state_reporting_snapshots: Stores state reporting snapshots records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- states: Stores states records for the application. Key attributes include code, name. 2 column(s) defined.

- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- tags: Stores tags records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.

- teacher_section_assignments: Stores teacher section assignments records for the application. References related entities via: section, staff. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- test_administrations: Stores test administrations records for the application. References related entities via: school, test. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

Position: records_clerk

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: testing_and_assessment_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: college_counselor

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.

- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.
- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s)

defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: financial_aid_advisor

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `policy_workflow_steps`: Stores policy workflow steps records for the application. References related entities via: `approver`, `workflow`. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_workflows`: Stores policy workflows records for the application. Key attributes include `name`. References related entities via: `policy`. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `proposal_standard_map`: Stores proposal standard map records for the application. References related entities via: `proposal`, `standard`. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `proposals`: Stores proposals records for the application. Key attributes include `title`. References related entities via: `association`, `curriculum`, `organization`. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `role_permissions`: Stores role permissions records for the application. References related entities via: `permission`, `role`. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `roles`: Stores roles records for the application. Key attributes include `name`. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `section_meetings`: Stores section meetings records for the application. References related entities via: `period`, `room`, `section`. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `sis_import_jobs`: Stores sis import jobs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``.
- `user_accounts`: Stores user accounts records for the application. References related entities via: `person`. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `users`: Stores users records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `votes`: Stores votes records for the application. References related entities via: `motion`, `voter`. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `webhooks`: Stores webhooks records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``.

Position: `school_secretary`

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- `agenda_item_approvals`: Stores agenda item approvals records for the application. References related entities via: `approver`, `item`, `step`. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: administrative_assistant

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: office_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: receptionist

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: student_services_clerk

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: health_office_clerk

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: athletic_trainer

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined.

defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: activity_sponsor

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit

timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: esports_coach

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: performing_arts_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: preschool_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: after_school_program_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined.

defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: enrichment_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit

timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: religion_teacher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: chief_academic_officer

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_student_support_services

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_curriculum_and_instruction

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_assessment_research_evaluation

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_data_analytics

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: instructional_materials_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: professional_development_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_special_education

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: school_psychologist

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: certified_occupational_therapy_assistant

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: board_certified_behavior_analyst

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: orientation_and_mobility_specialist

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: sped_compliance_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: paraprofessional

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: teachers_aide

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: vocational_specialist

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores `cic` memberships records for the application. References related entities via: `committee`, `person`. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores `cic` motions records for the application. References related entities via: `agenda item`, `moved by`, `seconded by`. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores `cic` proposal documents records for the application. References related entities via: `document`, `proposal`. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores `cic` proposal reviews records for the application. References related entities via: `proposal`, `reviewer`. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores `cic` proposals records for the application. Key attributes include `title`. References related entities via: `committee`, `course`, `school`, `subject`, `submitted by`. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores `cic` publications records for the application. References related entities via: `meeting`. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores `cic` resolutions records for the application. Key attributes include `title`. References related entities via: `meeting`. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores `cic` votes records for the application. References related entities via: `motion`, `person`. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: `principal`, `resource`. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: `file`, `meeting`. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: `meeting`, `user`. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: `meeting`. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: `meeting`. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include `title`. References related entities via: `governing body`, `org`. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: `agenda item`, `moved by`, `seconded by`. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: alternative_education_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: virtual_online_program_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: apprenticeship_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: testing_site_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: librarian

Description: Manages library collections and digital resources; supports research and literacy; collaborates on instructional materials.

Responsibilities:

- Manage school library collections and digital resources
- Support student literacy and research skills
- Collaborate with teachers on instructional resources

Tables:

- activities: Stores activities records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- alignments: Stores alignments records for the application. References related entities via: curriculum version, requirement. Includes standard audit timestamps (created_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- contacts: Stores contacts records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- course_prerequisites: Stores course prerequisites records for the application. References related entities via: course, prereq course. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- course_sections: Stores course sections records for the application. References related entities via: course, school, term. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- courses: Stores courses records for the application. Key attributes include name, code. References related entities via: school, subject. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- curriculum_units: Stores curriculum units records for the application. Key attributes include title. References related entities via: curriculum. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- curriculum_versions: Stores curriculum versions records for the application. References related entities via: curriculum. Includes standard audit timestamps (created_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- emergency_contacts: Stores emergency contacts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- frameworks: Stores frameworks records for the application. Key attributes include code, name. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- grade_levels: Stores grade levels records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- grade_scale_bands: Stores grade scale bands records for the application. References related entities via: grade scale. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grade_scales: Stores grade scales records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- grading_periods: Stores grading periods records for the application. Key attributes include name. References related entities via: term. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- guardians: Stores guardians records for the application. Includes standard audit timestamps (created_at, updated_at). 4 column(s) defined. Primary key is `id`.
- library_checkouts: Stores library checkouts records for the application. References related entities via: item, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- library_fines: Stores library fines records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- library_holds: Stores library holds records for the application. References related entities via: item, person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- library_items: Stores library items records for the application. Key attributes include title. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- order_line_items: Stores order line items records for the application. References related entities via: order, ticket type. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_addresses: Stores person addresses records for the application. References related entities via: address, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- person_contacts: Stores person contacts records for the application. References related entities via: contact, person. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- personal_notes: Stores personal notes records for the application. References related entities via: entity, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- persons: Stores persons records for the application. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`.
- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- student_guardians: Stores student guardians records for the application. References related entities via: guardian, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- student_program_enrollments: Stores student program enrollments records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at).

8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- student_school_enrollments: Stores student school enrollments records for the application. References related entities via: school, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_section_enrollments: Stores student section enrollments records for the application. References related entities via: section, student. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- student_transportation_assignments: Stores student transportation assignments records for the application. References related entities via: route, stop, student. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- students: Stores students records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- subjects: Stores subjects records for the application. Key attributes include name, code. References related entities via: department. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- transcript_lines: Stores transcript lines records for the application. References related entities via: course, student, term. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

Position: archivist

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined.

defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: print_shop_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: mailroom_clerk

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- **policy_workflows:** Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- **proposal_standard_map:** Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- **proposals:** Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- **role_permissions:** Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- **roles:** Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- **section_meetings:** Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- **sis_import_jobs:** Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- **user_accounts:** Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- **users:** Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- **votes:** Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- **webhooks:** Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_facilities

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: facilities_manager

Description: Leads building operations and maintenance; coordinates repairs, custodial and grounds, and ensures regulatory compliance.

Responsibilities:

- Oversee maintenance and operation of school buildings
- Manage custodial and grounds staff
- Plan for building repairs and capital improvements
- Ensure compliance with safety regulations

Tables:

- accommodations: Stores accommodations records for the application. References related entities via: iep plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- bell_schedules: Stores bell schedules records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- buildings: Stores buildings records for the application. Key attributes include name, code. References related entities via: facility. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- ell_plans: Stores ell plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- iep_plans: Stores iep plans records for the application. References related entities via: special ed case. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- leases: Stores leases records for the application. References related entities via: building. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- maintenance_requests: Stores maintenance requests records for the application. References related entities via: asset, building, converted work order, school, space, submitted by user. Includes standard audit timestamps (created_at, updated_at). 14 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

- plan_alignments: Stores plan alignments records for the application. References related entities via: agenda item, objective, policy. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- plan_assignments: Stores plan assignments records for the application. References related entities via: assignee, entity. 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- plan_filters: Stores plan filters records for the application. Key attributes include name. References related entities via: plan. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- plan_search_index: Stores plan search index records for the application. References related entities via: plan. 2 column(s) defined. 1 foreign key field(s) detected.

- plans: Stores plans records for the application. Key attributes include name. References related entities via: org. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- pm_plans: Stores pm plans records for the application. Key attributes include name. References related entities via: asset, building. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- rooms: Stores rooms records for the application. Key attributes include name. References related entities via: school. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- section504_plans: Stores section504 plans records for the application. References related entities via: student. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- section_room_assignments: Stores section room assignments records for the application. References related entities via: room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- state_reporting_snapshots: Stores state reporting snapshots records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.
- states: Stores states records for the application. Key attributes include code, name. 2 column(s) defined.
- warranties: Stores warranties records for the application. References related entities via: asset, vendor. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_parts: Stores work order parts records for the application. References related entities via: part, work order. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_order_tasks: Stores work order tasks records for the application. Key attributes include title. References related entities via: work order. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- work_order_time_logs: Stores work order time logs records for the application. References related entities via: user, work order. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- work_orders: Stores work orders records for the application. References related entities via: asset, assigned to user, building, request, school, space. Includes standard audit timestamps (created_at, updated_at). 22 column(s) defined. Primary key is `id`. 6 foreign key field(s) detected.

Position: plant_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: maintenance_technician

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: electrician

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: hvac_technician

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: locksmith

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: custodial_supervisor

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: custodian

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: night_lead

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: energy_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: routing_scheduling_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: dispatcher

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: activity_driver

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: mechanic

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined.

defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: crossing_guard

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: cafeteria_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: prep_cook

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: dietitian

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: nutritionist

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: director_of_safety_security

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: campus_police_officer

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s)

defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: security_guard

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: emergency_preparedness_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit

timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: controller

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: payroll_specialist

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: grants_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: purchasing_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_agenda_items`: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 4 foreign key field(s) detected.
- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined.

defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at,

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: insurance_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit

timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: e_rate_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit

timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: hr_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11

column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: benefits_manager

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: chief_information_officer

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: it_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: cloud_administrator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: server_administrator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: database_administrator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: field_technician

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: av_media_technician

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- `cic_committees`: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: data_analyst

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: communications_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign

key field(s) detected.

- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: family_engagement_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined.

Primary key is `id`. 2 foreign key field(s) detected.

- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.

- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.

- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: interpreter_services_coordinator

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.

- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: advancement_development_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- `cic_meeting_documents`: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_meetings`: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (`created_at`, `updated_at`). 10 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_memberships`: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_motions`: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `cic_proposal_documents`: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposal_reviews`: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `cic_proposals`: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (`created_at`, `updated_at`). 13 column(s) defined. Primary key is ``id``. 5 foreign key field(s) detected.
- `cic_publications`: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`, `created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.

- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.

- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: major_gifts_officer

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.

- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.

- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.

- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: financial_aid_director

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.

- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- `cic_resolutions`: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `cic_votes`: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `document_permissions`: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `export_runs`: Stores export runs records for the application. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``.
- `meeting_files`: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_permissions`: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (`created_at`, `updated_at`). 8 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `meeting_publications`: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `meeting_search_index`: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- `meetings`: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (`created_at`, `updated_at`). 12 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `motions`: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (`created_at`, `updated_at`). 11 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `permissions`: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (`created_at`, `updated_at`). 5 column(s) defined. Primary key is ``id``.
- `policy_approvals`: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (`created_at`, `updated_at`). 9 column(s) defined. Primary key is ``id``. 3 foreign key field(s) detected.
- `policy_comments`: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (`created_at`, `updated_at`). 7 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_files`: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (`created_at`). 4 column(s) defined. Primary key is ``id``. 2 foreign key field(s) detected.
- `policy_legal_refs`: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (`created_at`, `updated_at`). 6 column(s) defined. Primary key is ``id``. 1 foreign key field(s) detected.
- `policy_publications`: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (`published_at`). 4 column(s) defined. 1 foreign key field(s) detected.
- `policy_search_index`: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.

- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.

- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.

Position: graphic_designer

Description: Role within the school or district; duties vary by local policy, staffing model, and school size.

Responsibilities:

- Responsibilities to be defined based on district policy and role scope.

Tables:

- agenda_item_approvals: Stores agenda item approvals records for the application. References related entities via: approver, item, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- agenda_item_files: Stores agenda item files records for the application. References related entities via: agenda item, file. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_items: Stores agenda items records for the application. Key attributes include title. References related entities via: linked objective, linked policy, meeting, parent. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- agenda_workflow_steps: Stores agenda workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- agenda_workflows: Stores agenda workflows records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- audit_logs: Stores audit logs records for the application. References related entities via: actor, entity. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_agenda_items: Stores cic agenda items records for the application. Key attributes include title. References related entities via: course, meeting, parent, subject. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 4 foreign key field(s) detected.
- cic_committees: Stores cic committees records for the application. Key attributes include name. References related entities via: organization, school. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meeting_documents: Stores cic meeting documents records for the application. References related entities via: document, meeting. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_meetings: Stores cic meetings records for the application. Key attributes include title. References related entities via: committee. Includes standard audit timestamps (created_at, updated_at). 10 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_memberships: Stores cic memberships records for the application. References related entities via: committee, person. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_motions: Stores cic motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- cic_proposal_documents: Stores cic proposal documents records for the application. References related entities via: document, proposal. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- cic_proposal_reviews: Stores cic proposal reviews records for the application. References related entities via: proposal, reviewer. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- cic_proposals: Stores cic proposals records for the application. Key attributes include title. References related entities via: committee, course, school, subject, submitted by. Includes standard audit timestamps (created_at, updated_at). 13 column(s) defined. Primary key is `id`. 5 foreign key field(s) detected.
- cic_publications: Stores cic publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at, created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_resolutions: Stores cic resolutions records for the application. Key attributes include title. References related entities via: meeting. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- cic_votes: Stores cic votes records for the application. References related entities via: motion, person. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- document_permissions: Stores document permissions records for the application. References related entities via: principal, resource. 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- export_runs: Stores export runs records for the application. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`.
- meeting_files: Stores meeting files records for the application. References related entities via: file, meeting. 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_permissions: Stores meeting permissions records for the application. References related entities via: meeting, user. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- meeting_publications: Stores meeting publications records for the application. References related entities via: meeting. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- meeting_search_index: Stores meeting search index records for the application. References related entities via: meeting. 2 column(s) defined. 1 foreign key field(s) detected.
- meetings: Stores meetings records for the application. Key attributes include title. References related entities via: governing body, org. Includes standard audit timestamps (created_at, updated_at). 12 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- motions: Stores motions records for the application. References related entities via: agenda item, moved by, seconded by. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- permissions: Stores permissions records for the application. Key attributes include code. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- policy_approvals: Stores policy approvals records for the application. References related entities via: approver, policy version, step. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- policy_comments: Stores policy comments records for the application. References related entities via: policy version, user. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_files: Stores policy files records for the application. References related entities via: file, policy version. Includes standard audit timestamps (created_at). 4 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.

- policy_legal_refs: Stores policy legal refs records for the application. References related entities via: policy version. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- policy_publications: Stores policy publications records for the application. References related entities via: policy version. Includes standard audit timestamps (published_at). 4 column(s) defined. 1 foreign key field(s) detected.
- policy_search_index: Stores policy search index records for the application. References related entities via: policy. 2 column(s) defined. 1 foreign key field(s) detected.
- policy_versions: Stores policy versions records for the application. References related entities via: policy, supersedes version. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflow_steps: Stores policy workflow steps records for the application. References related entities via: approver, workflow. Includes standard audit timestamps (created_at, updated_at). 8 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- policy_workflows: Stores policy workflows records for the application. Key attributes include name. References related entities via: policy. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- proposal_standard_map: Stores proposal standard map records for the application. References related entities via: proposal, standard. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- proposals: Stores proposals records for the application. Key attributes include title. References related entities via: association, curriculum, organization. Includes standard audit timestamps (created_at, updated_at). 11 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- role_permissions: Stores role permissions records for the application. References related entities via: permission, role. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- roles: Stores roles records for the application. Key attributes include name. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- section_meetings: Stores section meetings records for the application. References related entities via: period, room, section. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 3 foreign key field(s) detected.
- sis_import_jobs: Stores sis import jobs records for the application. Includes standard audit timestamps (created_at, updated_at). 9 column(s) defined. Primary key is `id`.
- user_accounts: Stores user accounts records for the application. References related entities via: person. Includes standard audit timestamps (created_at, updated_at). 7 column(s) defined. Primary key is `id`. 1 foreign key field(s) detected.
- users: Stores users records for the application. Includes standard audit timestamps (created_at, updated_at). 5 column(s) defined. Primary key is `id`.
- votes: Stores votes records for the application. References related entities via: motion, voter. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`. 2 foreign key field(s) detected.
- webhooks: Stores webhooks records for the application. Includes standard audit timestamps (created_at, updated_at). 6 column(s) defined. Primary key is `id`.
