

Teaching and Learning Board Report

Shana Olson
Director of Teaching & Learning

March 2026

The teaching and learning department looks to elevate the core values in all of our work:

Passionate:

Our K-12 art teachers have had the opportunity to engage in several visits to other districts this year, as they prepare for a program evaluation next year and the start of curriculum review the following school year. These opportunities have invigorated our teachers by providing them with new ideas and approaches to bring back to their classrooms. Our already passionate educators have come back with even more zest for their instruction and courses!

Inclusive:

As previously noted, our curriculum team has spent time this year articulating the curriculum review process across all seven years of the cycle. While this has been time consuming, it has allowed us to see ways we can be inclusive of all stakeholders including both parents and students through surveys, piloting opportunities, and communication. These pieces will become evident to all as we implement them this year and in the years to come. One way we have already implemented these practices is through a family survey regarding science materials which gave us great insight into how students and families are experiencing our program. The next item will be a curriculum newsletter designed to regularly inform families of our work. By including students and families more intentionally in this work, we are providing opportunities for their voice to be heard.

Supportive & Collaborative:

As a lead up to our School Improvement planning process, each of our buildings has engaged in the Self-Assessment of MTSS Implementation (SAMI) led by Dr. Carenza or myself. This review of current practices has shed light on the great supports we have in place in our buildings, as well as allowed time for leadership teams to collaborate on how they can continue to improve their systems. While the SAMI process can be lengthy, it has provided clarity on how buildings can take the next step forward in supporting students at all levels.

Innovative:

The work of our AI Expedition team is underway! Led by our own Alex Glade, and Amy Wichman from Heartland AEA, our team of about 20 educators has started digging into learn more about Artificial Intelligence, its impact on schools, and how we move forward in an ever changing world of technology. One product of this group will be a portrait of an AI graduate from DCG, aligned with the core values of our strategic plan. This connection to these values ensures that we keep an eye on what our district has identified as priorities, while also considering the reality of AI.
